Epidemic Surveillance System - Official Report

Report Generated: 2025-12-28 15:12:43
Report Type: Disease Outbreak Analysis
Region: Rangamati Hill District, Bangladesh

Total Patients	Active Volunteers	Critical Alerts	Logistics Status
50	12	0	Standby

AI-Powered DBSCAN Cluster Analysis

SURVEILLANCE STATUS: Normal distribution of cases detected across 50 patients.

No significant clustering patterns identified by DBSCAN algorithm.

RISK LEVEL: Low - Current case distribution consistent with routine healthcare demand patterns.

No immediate epidemic threat detected in monitored regions.

RECOMMENDATION: Continue routine surveillance protocols. Maintain volunteer network for early warning detection.

Monitor trend patterns for anomalies in spatial distribution.

Disease Distribution Summary

Disease Type	Patient Count	Percentage
Malaria Cases	15	30.0%
Routine Checkups	35	70.0%
Total	50	100%
